4 English Translation

om Homage to Nairātmyā!

May the *bhagavān* Vajrasattva—whom they teach to be the *dharmakāya*, devoid of conceptualisation (*parikalpa*); the attractive (*cāru*) *sambhogakāya* that is just incomparable bliss; and, because of his (*yasya*) accomplishing what is beneficial for the world, is [also] the *nirmāṇakāya*—bring about your prosperity/liberation (*śreyas*)!

I will teach a *sādhana* of Nairātmyā, in accordance with my understanding (*yathāmati*) and with scripture (*yathāgama*), clearly laid out in one place, including some small details (*vistara*) for the ignorant.

Now, in a location ($sth\bar{a}na$) such as a charnel ground that is agreeable to the mind ($manonuk\bar{u}la$), a yogin, who consumes the pledge substances of the five nectars and so on, takes up a comfortable seat. With neither attachment nor inhibition, and with his mind intent on the aims of sentient beings, he should give rise to the pride of Nairātmyā and focus on a blue $h\bar{u}m$ on the sun at his heart. Then, drawing in [Heruka] who abides in the Akaniṣṭha heaven with light rays belonging to that $[h\bar{u}m]$ —[light rays] which radiate through the triple world—[the yogin] should visualise as residing in the sky (ambaratalavartin) before himself (agratas) [Heruka]: He is surrounded by the eight $yogin\bar{\iota}$ s. He has sixteen arms and eight faces. His crowns are made of skull garlands. He tramples the four Māras with his four feet. He is dark blue in colour. He has, fused ($nil\bar{\iota}na$) into the collection of skulls (($kap\bar{\iota}alasamkala$)) held (kalita) in his right group of hands (karanikara), an elephant, horse, donkey, bull, camel, human,

śarabha, and cat. He has residing in the lotus vessels situated in his left group of hands (pāṇikadamba) the earth goddess, the water god, the wind god, the fire god, the moon (rajanīnātha, the 'lord of the night'), the sun, Yama, and Dhanada (i.e., Kubera). His primary face is black. His right face is white like the moon or jasmine. His left face is intensely red. His dreadful upper face is dark grey. All of his remaining faces are all deep black. He is adorned with a garland of fifty skulls, and his neck is embraced by Nairātmyā.

Immediately thereafter, the [yogin] should have the eight yoginīs worship [Heruka] with the outer, secret, and reality forms of worship. And here, Picuvajra [i.e., the eight-faced Heruka] is worshipped in order to realise that insight and means are identical in nature. Then [the yogin] should bow and confess his sins and vow not to commit them again. He should rejoice in merit, embrace the triple refuge, give rise to the intention to achieve awakening (bodhicitta), offer his body, and request [the turning of the wheel of Dharma]. Then, after meditating on the four supreme states (caturbrahmavihāra), he should rest in a way such that he does not remain fixed [anywhere] (apratiṣṭhitarūpa) while meditating on the meaning of the mantra which is by nature one that brings together the core reality of all things—Oṁ ŚŪNYATĀJÑĀNAVAJRASVABHĀVĀTMAKO 'HAṃ ŚŪNYATĀJÑĀNAVAJRASVABHĀVĀTMAKĀḤ SARVADHARMĀḤ ('oṁ, I am in essence the vajra nature of the knowledge of emptiness').

Then, recollecting his resolve (pranidhi), [the yogin] should arise from his meditative concentration and visualise a sun disc in front [of himslef], created by the syllable ra. And he should visualise, formed by the letter $h\bar{u}\dot{m}$ belonging to that [sun disc], a crossed vajra. Created by vajras formed from the coming together of rays which emerge from that crossed vajra, a vajra fence, a canopy ($pa\tilde{n}jara$) and a line of enclosure, a vajra-made ground below, and a mote should be visualised by the [yogin]. And with the sun and vajra, which turn into light rays and spread everywhere, [the yogin] should make firm all that [which has been visualised up to this point].

Immediately after that, [the yogin] should visualise in space insight in the form of the $dharmodaya/\bar{a}$: its interior is hollow (antahsuṣira), it is extremely (at-ibahala) white, and is broad on top $(\bar{u}rdhvaviś\bar{a}la)$. Then, inside that, he should meditate on a broad lotus with eight multi-coloured petals. Then [the yogin]

should reflect on a ra in the middle of that [lotus], from which a sun disc arises, in the middle of which a $h\bar{u}\dot{m}$ transforms into a crossed vajra. And in the middle of the crossed vajra, he should visualise as [stacked] above one another (upary upari) the wind, fire, water, and earth [elements]—which are [mandalas that are] grey, red, white, and green; in the shapes of a bow, a triangle, a globe, and a square; and transforming out of the syllables yam, ram, vam, and lam. Regarding (\bar{a} - \sqrt{kal}) all of this as merely awareness ($j\tilde{n}\bar{a}nam\bar{a}tra$), he should visualise as transformed out of those elements a temple palace ($k\bar{u}t\bar{a}g\bar{a}ra$)—it has four corners and four doors, it is beautified with eight pillars, and it is ornamented with necklaces ($h\bar{a}ra$) and half necklaces ($ardhah\bar{a}ra$).

Then, in the interior of the fence, [the *yogin*] should bring to mind the eight charnel grounds. Here, in the east [charnel ground] is Indra [and], in a yellow myrobalan tree (*harītakīvṛkṣa*), the dark (*mecaka*) elephant-faced [*yakṣa*]. In the south is Yama [and], in a mango tree, the buffalo-faced [*yakṣa*] who is white. In the west, at an ashoka tree, is Varuṇa (the water god) [and] the red lion-faced [*yakṣa*]. In the north, at a bodhi tree, is Kubera [and] the green man-faced [*yakṣa*].

In the south east, at a *karañja* tree (Indian beech tree), is Agni (Vaiśvānara) [and] the white goat-faced [*yakṣa*]. In the south west, at a fiddle-leaf fig tree, is Nairṛta/Nirṛti (Naravāhana) [and] the pale-white human-faced [*yakṣa*]. In the north west, at an arjun tree, is Vāyu (Pavana) [and] the yellow deer-faced [*yakṣa*]. In the north east, there is Śiva (Bhūteśa) [and], in a banyan tree, the many-coloured bull-faced [*yakṣa*]. And all of these [*yakṣas*] have skull cups held in their left hands, have their right hands occupied with various weapons, and reveal the upper halves of their bodies.

Similarly, in the eight directions, in order beginning in the east, there are [the $n\bar{a}gas$] Ananta, Padma, Vāsuki, Mahāpadma, Takṣaka, Śaṃkhapāla, Karkoṭa, and Kulika. And eight clouds should be brought to mind, which are dark (mecaka), white ($\acute{s}ukla$), white/black ($\acute{s}iti$), pale-white ($p\bar{a}n\dot{q}u$), red, yellow, green. And similarly, the guardians of the directions are their well-known colours, and the eight caityas should be understood to be corresponding colours.

Then [the *yogin*] should call to mind a red lotus with eight flower in the middle of the *maṇḍala* and then visualise fifteen corpses on the four petals of the east and so forth in the middle of that lotus, likewise at the four corners of the

deity palace, at the four doors, and below and above. Then he should meditate on the fifteen vowels, i.e. a and so forth, which are mounted atop the corpses and situated in the middle of moons and suns that have transformed from the line of vowels and the line of consonants. Then, by the transforming of a and the other seed syllables, [there appear] in all of those places choppers ($kartik\bar{a}$) with the [corresponding] syllable. Then, with the transforming of the moons, suns, and choppers with their seed syllables, he should meditate on the fifteen $yogin\bar{\imath}$ s, beginning with Nairātmyā. Of these [elements in the meditation], the moon has the mirror-like knowledge; the sun has the knowledge of equality; the seed syllable placed in between them is discriminating [knowledge]; the oneness of all of these [the knowledge of] the performance of activities; and the arising of the form is the fully pure Dharma Realm.

Here in the middle of the central part of the lotus (varaṭaka) Nairāmtyā should be meditated on: she arises from the vowel a; she is of the nature of enmity (dveṣa); she is sealed by Akṣobhya; she is of the nature of the consciousness aggregate; she has wisdom and means as her essence; her neck is embraced by a $khaṭv\bar{a}nga$, which takes the form of her external 'means' [i.e., male consort]. On the petals in the east and so forth, [the yogin] should visualise Vajrā, Gaurī, Vārī, and Vajraḍākinī: they arise from \bar{a} , i, \bar{i} , and u; they are of the nature of delusion (moha), back-biting (paiśunya), passion ($r\bar{a}ga$), and jealousy ($\bar{i}rṣy\bar{a}$); they are sealed by Vairocana, Ratnasambhava, Amitābha, and Amoghasiddhi; and they are of the nature of the aggregates of material form ($r\bar{u}pa$), sensation ($vedan\bar{a}$), identification ($samjn\bar{a}$), conditioning factors ($samsk\bar{a}ra$), and consciousness ($vi-jn\bar{a}na$).

Then, in the external enclosure, in the directions of south-east and so forth, [the yogin] should visualise Pukkasī, Śabarī, Caṇḍālī, and Dombī: they arise from \bar{u} , r, \bar{r} , and l; they are sealed by Akṣobhya, Vairocana, Ratnasambhava, and Amitābha; and they are of the nature of earth, water, fire, and wind.

Next, at the doors of the east and so forth, Gaurī, Caurī, Vettālī, and Ghasmarī should be meditated on: they arise from the vowels \bar{l} , e, ai, and o; they are sealed by the seals of Pukkasī and so forth; they are of the nature of visual form, sound, scent, and taste. After this, below and above, [the yogin] should meditate on Bhūcarī and Khecarī: they are sealed by delusion (Vairocana) and passion (Amitābha); they arise from au and am; they are of the nature of touch

and the mental sphere; and they are of the essence of existence and *nirvāṇa*.

And here, immediately after the goddesses arise, as they receive the consecrations of their given families, [the *yogin*] should be aware of the seals of their given family.

These fifteen $yogin\bar{\imath}s$ are sixteen years of age. They each stand on a sun disc and have the colour of mixed collyrium ($bhinn\bar{a}njana$). They are of the nature of bodhicitta. Their upward-streaming hair is flaming (jvalita) and tawny (pingala). They each bear a skull ($kap\bar{a}la$) measuring four finger breadths (angula) on their pallets ($t\bar{a}luka$) which has the nature of Vajrasattva, and they each support five dry (suska) skulls (munda) on their heads (siras) which are of the nature of the five buddhas. They each have three round, red eyes. Their faces bare fangs ($damstr\bar{a}kar\bar{a}la$). They are adorned with garlands of fifteen dry skulls that have the fifteen mother goddesses ($m\bar{a}rtrik\bar{a}$) as their nature. Their hips (kati) and buttocks (nitamba) are covered ($\bar{a}vrta$) with a tiger skin ($vy\bar{a}ghracarman$). Standing in the dancing posture of one leg being drawn in and the other extended ($ard-haparyankan\bar{a}tya$), they are mounted atop corpses and bear the five $mudr\bar{a}s$. Of these,

Akṣobhya is in the form of the chaplet (*cakri*), Amitābha as earrings (*kuṇḍala*). Ratnasambhava is in the necklace (*kaṇṭhamālā*), and Vairocana is present on the forearms (*hasta*) [as a bracelet]. (1)

Amoghasiddhi is in the belt ($mekhal\bar{a}$), and likewise the Vajra Bearer is in all limbs. The chaplet is on the head to pay obeisance to the teacher, preceptor ($\bar{a}c\bar{a}rya$), and personal deity (istadeva). (2)

The earrings are to be worn on the ears so as not to hear the guru or Vajradhara spoken ill of. The necklace is to recite mantra. (3)

The belt is to partake in (\sqrt{bhaj}) a $mudr\bar{a}$, the bracelet to abandon the taking of life $(pr\bar{a}nivadha)$. [The $yogin\bar{\iota}s$] wear anklets $(n\bar{u}pura)$ and bracelets $(key\bar{u}ra)$, and their black colour is due to their friendliness (maitracitta). (4)

Their hair's having red-tawny colour (raktapingala) makes known their having great passion ($mah\bar{a}r\bar{a}ga$), and in order to show their wrath, [their hair]

is pointing upwards. Because their body, speech, and mind have extreme passion (atirāga) as their nature, their eyes are naturally (svabhāvena) deep red (mahārāga). They each have two arms that are of the nature of existence and nirvāṇa. They each have a chopper (kartikā) in order to cut the faults of pride and the like (mānādidoṣa). They each have a skull that corresponds to the pure nature of the three realms: it is filled with the blood of the four māras—the aggregates and so forth; it is has three portions (trikhaṇḍa); and it is a [pure] embodiment of all discursive thought (sakalavikalpaśarīrin). Their bending at three places (tribhaṅga - or 'three bends') corresponds to the pure nature of the dhrarma-, sambhoga-, and nirmāṇakāyas. Their slender bodies (śarīrayaṣṭi) correspond to the pure nature of the svābhāvikakāya. They have a tiger-skin garment in order to make known their being free of veils (anāvaraṇatā). Their legs are †in the ardhaparyaṅka posture† to make known their not having the three realms as a mental object (traidhātukānālambanatā). In order to make known single-flavouredness (ekarasatā), they press on the ground with one food.

After that, using light rays with five forms that emerge the seed syllable at his heart, [the yogin] should draw in the Nairātmyā circle whose nature is the wisdom deity ($j\tilde{n}\bar{a}nasattva$) residing in the Akaniṣṭha heaven, and he should make it enter his heart's seed syllable. After making the wisdom deity and pledge deity one, he will, in giving rise to the pride of Nairātmyā, become equal to Nairātmyā.

And here, for the sake of establishing the six-branch yoga, [the yogin] should successively (anukrameṇa) meditate [on all the $yogin\bar{\imath}s$ in the circle] as having the colour black, red, yellow, green, blue, and white.

Now, as one proceeds towards excellence in [this] meditation, first it appears like the moon covered by clouds. By excelling even greater than that, it appears like an illusion. By excelling greater than that too, it shines forth like a dream. Subsequently, when excellence [in meditation] is fully matured, one succeeds as a *yogin* of *mahāmudrā*, achieving the non-difference of the sleeping and waking states. This is the stage of arising.

Elsewhere, the profound stage of arising ($gambh\bar{i}rotpattikrama$) [is taught] as follows: [The yogin] should see in an instant bodhicitta—precisely that which, through the union of bola and kakkola, has the nature of Great Bliss and arises in between Supreme [Bliss] and [the Bliss of] Cessation, and which is comprised of fifteen parts ($kal\bar{a}$)—as taking the form of the fifteen $yogin\bar{i}s$, who have the

above-taught colour (*varṇa*), insignia (*cihna*), and form (*saṃsthāna*). For that [*bodhicitta*] too has as its nature the five aggregates (*pañcaskandha*), four elements (*caturdhātu*), six objects (*ṣaḍviṣaya*), and body, speech, and mind.

The stage of the arisen (utpannakrama) [is taught] as follows: While simply \dagger not \dagger focusing on a seed syllable, [the yogin] should see in an instant (jhagiti) the mandala circle comprised of the fifteen $yogin\bar{\imath}s$.

Then there is the stage of the fully perfected (pariniṣpannakrama): As is well known, in the vajra body, which is empowered by awareness (jñānādhiṣṭhita), the thirty-two channels flow from the place of Great Bliss, and they are the thirty-two yoginīs; thus, the body itself is comprised of Nairātmyā's circle. To explain: lalanā and rasanā, residing on the left and right flanks (pārśva) from the below the nose and down to the navel, are called the sun and the moon. Below the navel, precisely those two are the yoni channels and are [called] lalanā and rasanā, conveying akṣobhya (urine) and blood. The avadhūtī, residing in the middle of the head, throat, heart, navel, and genitals, carries bodhicitta. These channels are Nairātmyā.

The $abhedy\bar{a}$ and $s\bar{u}k\bar{s}m\bar{a}$ channels, which reside at the top of the head ($\acute{s}i-rah\acute{s}ikh\bar{a}$) and nourish respectively ($yath\bar{a}samkhyam$) twin pairs (yugmayugala)—namely, nails and teeth and head hair and body hair—are Vajrā. The $divy\bar{a}$ channel, which is in the right ear ($dak\dot{s}inakarna$) and nourishes the skin and its secretions (tvanmala), and the $v\bar{a}m\bar{a}$ channel, which is in the back bone ($pr\dot{s}thavam\dot{s}a$) and nourishes flesh ($pi\dot{s}ita$), are Gaurī. The $v\bar{a}man\bar{\imath}$ and $k\bar{u}rmaj\bar{a}$ channels, located in the left ear ($v\bar{a}makarna$) and the middle of the brows ($bhr\bar{u}madhya$) and nourishing tendons ($sn\bar{a}yu$) and the skeleton ($asthim\bar{a}l\bar{a}$), are $V\bar{a}r\bar{\imath}$. The $bh\bar{a}vak\bar{\imath}$ and $sek\bar{a}$ channels, which reside in the eyes ($cak\dot{s}us$) and the under arms ($b\bar{a}hum\bar{u}la$) and nourish the kidneys (vrkka) and heart (hrdaya), are $D\bar{a}kin\bar{\imath}$.

The $doṣ\bar{a}vat\bar{\iota}$ and $mah\bar{a}viṣṭ\bar{a}$ channels, which are in the armpit (kakṣa) and breasts (stana) and nourish the eyes (cakṣus) and bile (pitta), are Pukkasī. The $m\bar{a}$ - $tar\bar{a}$ and $sarvar\bar{\iota}$ channels, which reside in the navel $(n\bar{a}bhi)$ and the tip of the nose $(n\bar{a}s\bar{a}gra)$ and nourish the lungs (phupphusa) and intestinal network $(antram\bar{a}l\bar{a})$, are Śabarī. The $ś\bar{\iota}tad\bar{a}$ and $uṣm\bar{a}$ channels, which reside in the mouth (mukha) and in the throat (kanṭha) and nourish the sinews of the rib area $(p\bar{a}r\acute{s}vatantu)$ and the stomach (udara), are Caṇḍālī. The $pravan\bar{a}$ channel in the heart, which nourishes excrement $(viṣṭh\bar{a})$, and the $hrṣṭavadan\bar{a}$ channel in the genitals (linga),

which moves towards the part of the hair (sīmanta), are Dombī.

The $svar\bar{u}pin\bar{\iota}$ and $s\bar{a}m\bar{a}ny\bar{a}$ channels in the penis (medhra) and the anus (guda), which nourish phlegm ($\acute{s}lesman$) and bile (pitta), are Gaurī. The $hetud\bar{a}yik\bar{a}$ and $viyog\bar{a}$ channels in the thighs ($\bar{u}ru$) and the lower legs/calves (jangha), which nourish blood ($\acute{s}onita$) and sweat (sveda), are Caurī. The $preman\bar{\iota}$ and $siddh\bar{a}$ channels in the big toes ($p\bar{a}d\bar{a}ngusha$) and the back of the feet/heel ($p\bar{a}daprsha$), which nourish fat (medas) and tears of sorrow ($khed\bar{a}snu$), are Vettālī. The $p\bar{a}vak\bar{\iota}$ and $suman\bar{a}$ channels are in the thumbs (angusha) and pair of knees ($j\bar{a}nu$). Of these, the former nourishes saliva (kheta), and the latter nourishes \dagger a child's \dagger mucus of the nose (simhana). These two are Ghasmarī.

At one's heart's lotus's central region ($karnik\bar{a}$) and its petals to the east and so are the channels $trivrtt\bar{a}$, $k\bar{a}min\bar{\imath}$. $geh\bar{a}$, $candik\bar{a}$, and $m\bar{a}rad\bar{a}rik\bar{a}$. Of these, the first pair of channels is Bhūcarī, and the remaining ones are Khecarī. And here, a channel that produces ($pra-\sqrt{s\bar{u}}$), nourishes (\sqrt{pus}), or leads (\sqrt{gam}) to something is [said to be] its conveyer ($tadv\bar{a}h\bar{a}$).

Furthermore, these [channels]—having the nature of body, speech, and mind; the *dharma*-, sambhoga-, and $nirm\bar{a}na[k\bar{a}ya]s$; and the three existences (trib-hava)—are individually established in the four cakras in bodies. Of these [cakras], the cakra of production ($nirm\bar{a}na$) has sixty-four variegated petals, has a black a as its seed syllables, and is established facing upwards below the navel. The cakra of dharma is a lotus of eight white petals, has a black $h\bar{u}m$ as its seed syllable, and is established in the heart region. In the throat is the cakra of enjoyment (samb-hoga), which has sixteen red petals and a red om as its seed syllable. At the crown is the cakra of Great Bliss: it has twelve white petals and a white ham as its seed syllable, and it faces dowardwords with a stream of nectar ($p\bar{i}y\bar{u}sadh\bar{a}r\bar{a}$) flowing from it. Here the individual establishment ($vyavasth\bar{a}$) of the Blisses, Moments, and so forth should be known based on a teacher's key instructions (upadesa).

The natural stage ($sv\bar{a}bh\bar{a}vikah$, kramah) is manifesting bodhicitta [in a way] that leads to the non-dual [state] of effort-free ($an\bar{a}bhoga$) coalescence (yuganad-dha).

One who is then tired from meditation ($bh\bar{a}van\bar{a}khinna$) should repeat mantra while giving rise to the pride of Nairātmyā. For this, the following [vowels] beginning with a are the mantra: they are innately established (sahajasiddha), have $o\dot{m}$ at their beginning, end in $sv\bar{a}h\bar{a}$, and have the nature of the fifteen vowels.

Namely, [the mantra is] om a ā i ī u ū ṛ ṛ ḷ ḷ e ai o au aṃ svāhā.

Giving rise to the pride of the red Nairātmyā, one should recite the *purakṣobha* mantra. For that the mantra is as follows: *oṁ* a ka ca ta ta pa ya śa svāhā.

The mantra for bali is, om akāro mukhaṃ sarvadharmāṇām ādyanutpannatvāt om āḥ hūm phaṭ svāhā.

The mantra for the empowerment of pledge [substances] is $o\dot{m} \ \bar{a}\dot{h} \ h\bar{u}\dot{m}$.

After that, in the state of the *maṇḍala* circle being manifest, [the *yogin*] should remove the breasts and form a *bola* in the middle of the *kakkola* of his body. He should make the two shores (*pārśvadvaya*) into the bell.

Having diligently (yatnena) understood the essence of the teachings ($ś\bar{a}stras\bar{a}ra$) in the mantra vehicle from my guru, I have compassionately composed this Illumination of Nairātmyā.

Alas, how can beings (śarīrin) here have certainty (niścaya) about this profound maṇḍala circle if they don't have their heads (mastaka) dirtied (rūkṣita) by the dust (reṇu) of lord Śabara's lotus feet (padāmbuja)?

By the merit (*kuśala*) obtained in this spreading out (*vistṛti*) of the *abhisamaya*, may all living beings (*samastaloka*) stand firm (*pratiṣṭhāt-man*—have as their nature the standing firm) in the state of Vajradhara (*kuliśadhara*), having eliminated the pain and suffering of the three worlds.

This concludes the *Nairātmyāprakāśa*. It was composed by the glorious scholar, teacher, and realised master Advayavajrapāda.

Notes

- 1. The opening om namh śrīnairātmyāyai is a scribal homage.
- 2. This verse, in Mālinī metre, serves as a maṅgalācaraṇa in other texts attributed to Advayavajra. We find it in Mar pa chos kyi blo gros's Tibetan translation of the Saptākṣarasādhana: kun du rtog pa yongs su spangs pa'i chos skur gang gsungs dang//dpe med bde ba rtsal gyis mdzes pa longs spyod rdzogs sku dang//gang gi gnas la phan par mdzad pa las ni sprul pa'i sku//bcom ldan rdo rje sems dpa' de yis khyed la bde legs shog/ (D f. 130r-v) (read rtsal as tsam). It is absent from the text as printed in Bhattacaryya's edition of the Sādhanamālā.

The verse is also found at the beginning of Advayavajra's *Śrīcakrasaṃvaropadeśa, for which rMa ban chos 'bar's translation reads: gang zhig kun du brtags pa yongs su spangs pa'i chos sku dang/ /dpe med bde ba tsam gyis mdzes pa'i longs spyod rdzogs sku dang/ gang gi thugs rje sa rnams phan mdzad sprul pa'i sku brjod pa/ /bcom ldan rdo rje sems dpa' de yis khyod la bde legs shog / (D f. 139r).

The verse is also transmitted in the so-called *Sādhanavidhāna* codex, on fol. 3r, in an *adhyātmahomavidhi*. Péter-Dániel Szántó (personal communication) surmises that the colophon to this brief text is written in old Newar and amounts to saying that the *vidhi* was extracted from a *ṭippanī* on the *Saṃvarodayatantra*. Here the manuscript reads: parahitaparikalpaṃ dharmmakāyajam āhu | nirupamasukhapātraṃ cāru sabhogakāyaḥ | bhuvanahitavināt yasya nirmmāṇakāyaḥ | sa bhavatu bhagavān vaḥ śreyase vajrasatvaḥ ||

Prof. Isaacson (personal communication) has also read the verse in manuscripts of the *Yogāmbaratantra* and the (proto-)*Kalparājatantra*, both Nepalese compilations. The NGMPP online catalogue offers a transcription of the verses in ms A 142-12, a witness of the *Yogāmbaratantra*. According to this transcription, the verse also reads *pātraṃ* for *mātraṃ*, *nirmāṇakāya* for *nirmāṇakāyaṃ*, and *sa bhayatu bhagavān* for *bhayatu sa bhagavān*. It would appear that the verse achieve some popularity in Nepal.

The reading $p\bar{a}tra$ can probably be given the Tibetan evidence, but the variant is an interesting one. The readings sa bhavatu and bhavatu sa are effectively indistinguishable. One may wish to read $nirm\bar{a}nak\bar{a}yah$ in the third $p\bar{a}da$, in which case the meaning is not that Vajrasattva is taught to be the $nirm\bar{a}nak\bar{a}ya$, but that he simply has the $nirm\bar{a}nak\bar{a}ya$. Some further research into Advayavajra's position on the three $k\bar{a}yas$ may reveal which of these understandings is more appropriate. On the reading $nirm\bar{a}nak\bar{a}yah$, the relatively pronoun yasya is, at least according to my perception, slightly smoother.

It may be worth comparing the two above Tibetan translations of this verse with Ye shes 'byung gnas's effort here for the NaiPra: *kun du rtog pa yongs spangs chos skur*

gang brjod pa/ /dpe med bde ba tsam mdzes longs spyod rdzogs pa'i sku/ /sa yi phan pa'i rgyur gyur gang gi sprul pa'i sku/ /bcom ldan rdo rje sems dpa' khyod des dge bar shog /. The translation rgyur gyur for vidhānāt is difficult to account for; it also appears to be an adjective qualifying either gang or sprul pa'i sku rather than an ablative form (here it is perhaps Marpa's translation that has the clearest rendering with mdzas pa las). Similarly, the syntax of the final line, with rdo rje sems dpa' separated from the pronoun de, is considerably more opaque than the other two translations.

Although it may be entirely coincidental, it is nonetheless noteworthy that the opening verse of Ratnākaraśānti's *Bhramaharasādhana* is also in Mālinī metre.

- 3. T_D renders the first two $p\bar{a}das$ as follows: $gcig\ tu\ gsal\ la\ rgyas\ pa\ yis//mi\ rtog\ nyung\ la\ rgyas\ pa\ dag/$ /. If the translation has been transmitted correctly here, I am uncertain what meaning this was intended to convey. I understand, somewhat tentatively, the Sanskrit text as edited here in the following sense: '[A $s\bar{a}dhana$ which is] clearly (spasta—to be taken as an adverb, adjective, or both) laid out in a single place, with a small amount of prolixity for those who lack understanding.'
- 4. Where the Sanskrit manuscript reads $tatas\ thad\bar{\imath}yai$, T_D reads $de\ nas\ de'i\ gsal\ ba'i$, suggesting the conjecture $tatas\ tadd\bar{\imath}ptai$. The reading $tatas\ tad\bar{\imath}yai$, however, reads very smoothly and requires little emendation (stha and sta are similar in this scribe's writing).
- 5. T_D reflects a plural form of *akaniṣṭhabhuvanavartin*: 'og min gyi gnas na bzhugs pa rnams. Given that what follows is a description of only the eight-faced Heruka, the plural form can be regarded as an error.

 T_D also places 'og min gyi gnas na bzhugs pa rnams before \bar{a} kṛṣya (bkug ste), which may be simply for syntactical naturalness in Tibetan rather than a reflection of a different reading in Sanskrit.

- 6. T_D lacks a reflex of avadāta within the compound indukundāvadātadakṣiṇamukha: g.yas pa'i zhal ni zla ba dang/ kun da lta bu'o/ /
- 7. Here the transmitted text has suffered from what was likely a scribe's eyeskip. I offer this conjectural reading based on T_D as well as similar formulations in two other $s\bar{a}d$ -hanas by Advayavajra. First, the $Sapt\bar{a}k\bar{s}aras\bar{a}dhana$ reads: ... $yath\bar{a}vidhin\bar{a}$ $p\bar{u}jayet$ vandayet | tatas $te\bar{s}\bar{a}m$ puratah $p\bar{a}pade\acute{s}an\bar{a}p\bar{a}p\bar{a}karanasamvaram$ $puny\bar{a}numodan\bar{a}tri\acute{s}aranagamanabodhicittotp\bar{a}da-\bar{a}tmabh\bar{a}vaniryy\bar{a}tan\bar{a}-adhye\bar{s}an\bar{a}y\bar{a}can\bar{a}\acute{s}$ ca $krtv\bar{a}$... (ed. p. 460). In the NaiPra, the Tibetan translation indicates the inclusion of $punyaparin\bar{a}man\bar{a}$, but the word $y\bar{a}can\bar{a}$ is reflected neither in the Tibetan nor in the Sanskrit manuscript, which has resumed at the place where one would expect to see it. Otherwise the two texts are evidently closely parallel.

Advayavajra's Vajravārāhīsādhana reads as follows: tadagrataḥ pāpadeśanāpāpākaraṇasam-varapuṇyānumodanāpuṇyapariṇāmanātriśaraṇagamanabodhicittotpādādikaṃ kṛtvā ... (edf p. 59; ed-b p. 424) (°pāpākaraṇasaṃvara°] ed-f; deest in ed-b but recorded as a variant). Here vandana is not present, and ātmaniryātana and so forth have probably been replaced with the word ādika. In the NaiPra, the ca before kṛtvā indicates that more than one word precedes, as in Saptākṣarasādhana. I assume pāpadeśanāpāpākaraṇasaṃvaraṃ can be understood as a samāhāradvandva, but can find no other attestation of the compound, and it is not immediately clear to me why these actions should be divided in the way they are. On the various preliminary stages in similar sādhanas, see English (2002: 122–124).

As for the first sentence ($atra\ ca\ praj\~nop\=ayayo\.p$, etc.), I can find no parallel in others $s\=adhanas$, so I only rely on T_D for the proposed conjecture. If I have understood the Tibetan correctly, I believe Advayavajra is offering a justification for worshipping the eight-faced Heruka, i.e. Picuvajra, at the beginning of the $s\=adhana$: to put it somewhat baldly, a $s\=adhana$ that includes worship (and meditation on) both male and female deities serves to help one realise insight and means as having an identical nature.

- 8. On the compound śūnyatājñānavajrasvabhāvātmaka, traditional authorities have interpreted vajra either as co-referential with jñāna or with svabhāva. The former interpretation is offered by, for example, Śākyarakṣita in his Abhisamayamañjarī, and the latter by Abhayākaragupta in ch. 4 of his Abhayapaddhati (239–40 n. 273, n. 277; ISAAC-SON 2007: 292; YANG 2014: 140, 234).
- 9. T_D renders śūnyatājñānavajrasvabhāvātmakāḥ sarvadharmāḥ in Tibetan, indicating that, perhaps, these words were not understood as part of the mantra: dngos po mtha' dag gi de kho na nyid kyi dngos po bsdus pa/ oṁ shū nya tā dznyā na badzra sva bhā ba ātma ko 'ham/ stong pa nyid kyi ye shes rdo rje rang bzhin gyi bdag nyid la chos thams cad ces bya ba'i sngags kyi don bsgoms pas rab tu mi gnas pa'i ngo bor gnas so/ / Indeed the mantra oṁ śūnyatājñānavajrasvabhāvātmako 'ham does generally stand on its own; however, it would appear that Advayavajra is fond of this reformulation of the mantra, which emphasizes the emptiness of all phenomena (see English 2002: 128).

Evidence to support this can be found in other sādhanas composed by Advayavajra, such as the Saptākṣarasādhana: tataḥ oṁ śūnyatājñānavajasvabhāvātmakāḥ sarvadhāḥ oṁ śūnyatājñānavajasvabhāvātmako 'ham iti sakalavastutattvasārasaṃgrāhakaṃ mantrārtham āmukhīkurvvan ... (ed. p. 460). Note, however, that Mar pa Chos kyi dbang phyug's Tibetan translation of the Saptākṣarasādhana does not reflect the first oṁ and appears to have attempted to interpret the words as a stand-alone clause: de nas chos thams cad ni stong pa nyid kyi ye shes kyi rdo rje'i bdag nyid de/ oṁ shū nya tā dznyā na badzra sva

bhā ba ātma ko 'ham/ zhes bya ba dngos po ma lus pa'i de kho na nyid sdud par byed pa'i sngags kyi de kho na mngon du byed cing/ (D f. 131r) (de kho na may be a corruption of don or don kho na).

Advayavajra's Hevajraviśuddhinidhi also has a formulation resembling the Saptākṣarasādhana: etadantaraṃ (?) sarvadharmapravicayalakṣaṇayā prajñayā sarvadharmān pratītyasamutpādakān svabhāvānutpannān adhimuñcan, tadarthaṃ dyotakatvāt sakalavastutattvasārasaṅgrāhakatvena ca, oṁ śūnyatājñānavajrasvabhāvātmakāḥ sarvadharmmāḥ | oṁ śūnyatājñānavajrasvabhāvātmako 'ham iti mantram imaṃ manasā paṭhitvā ... (ms f. 66r7–v2). Here 'Gos lo tsā ba's Tibetan translation completely lacks any reflex of the words in question (see D f. 176r).

We also find a rendering of more or less the same formulation in the Tibetan translation of Advayavajra's *Hevajrasādhana: de ltar bla na med pa'i chos thams cad rab tu 'byed pa'i mtshan nyid kyi shes rab kyis chos thams cad rten 'brel las skyes pa tsam rang bzhin gyis gzod ma nas skye ba med par gsal bar shes par bya ste/ dngos po ma lus pa'i bde ba de kho na nyid kyi snying por bsdus pa'i stong pa'i ye shes kyi rdo rje'i rang bzhin gyi chos shes nas om shū nya tā dznyā na badzra sva bhā va ā tma ko 'ham zhes pa'i sngags de yid kyis bzlas te/ (D f. 163r). Leaving aside other slight differences for the moment, we can see that the translator (whose identity is unknown to me) appears to have treated the words in question with an approach similar to that of Mar pa Chos kyi dbang phyug.

Finally, the extended mantra is also found in some recensions of the *Vajravārāhīsādhana*. Finot's edition reads: tatah, oṃ śūnyatājñānasvabhāvātmakāḥ sarvvadharmmāḥ, oṃ śūnyatājñānavajrasvabhāvātmako 'ham iti mantrārtham āmukhīkurvan muhūrttam apratiṣṭharūpena tiṣṭhet (perhaps vajra is missing from the first śūnyatājñāna°). Bhattacharyya's edition in the *Sādhanamālā* omits the first half of the mantra, as does the translation by mTshur ston dBang gi rdo rje. Yar lung lo tsā ba Grags pa rgyal mtshan's translation of the same text, however, does reflect something of the mantra: *de nas chos thams cad rdo rje'i rang bzhin gyi stong pa nyid du byas nas/ oṁ shū nya tā dznyā na badzra svabhā ba ātma ko 'ham/ zhes pa'i sngags kyi don mngon du byas nas skad cig gis mi gnas pa'i skur bsam par bya'o/ /*

Taken altogether, this evidence affirms that Advayavajra had a special preference for an 'enhanced' formulation of the popular mantra, which may have caused some confusion for Tibetan translators. In view of this preference, it may also be worth noting that the formulation, as well as other key terms associated with Advayavajra's philosophy such as *apratisthita*, is wholly absent from the relevant portion of the *Hevajrākhya*, which is a factor to consider when evaluating the text's authorial attribution: *tataḥ paṭhed jinamantrakam*—oṁ śūnyatājñānavajrasvabhāvātmako 'ham. *tasmin samaye sva-*

paraśaradamalanabhasannibham paśyet (f. 9r).

One lingering doubt is that the four other attestations of the mantra appear to put $sarvadharm\bar{a}h$ first and aham second, whereas the NaiPra does the opposite. Given that T_D and the Sanskrit witness both support this seemingly reversed order in the NaiPra, I do not emend the text; however, there is some doubt as to whether it is correct.

- 10. T_D lacks a reflex of samādher and renders praṇidhim anusmṛtya slightly freely: de nas smon lam gyis dran pas langs te/
- 11. One may consider correcting the manuscript's reading <code>anusamhater vvajraih</code> to <code>anusamhatair vajraih</code>, but I do not believe this yields adaquate sense. The Tibetan translation reads 'od zer gyi rdul phra rab kyi tshogs 'phros pa des, and on this basis we may conjecture a reading along the lines of <code>sphuradbhir anusamhatair raśmibhih</code> ('with light densely packed with particles'). This not a bad interpretation, but I do wonder if it was possibly the Tibetan translator's own conjecture, made in an attempt to understand <code>anusamhataih</code>. The reading I suggest here is partially inspired by Ratnākaraśānti's MuĀ, commenting on HeTa 1.3.3:

purastād agnivarņena repheņa sūryamaṇḍalaṃ dhyātvā tanmadhye hūṃkāreṇa viśvavajraṃ vicintya tatkiraṇasūkṣmavajraiḥ sphuradbhiś caturdiggatair atyantaṃ ghanībhāvāt prākāraṃ bhāvayet (as cited in Isaacson 2007: 293).

We see that it is indeed additional vajras from the initial vajra that produce the fence, and these are described as '[made of] the light rays of that [initial vajra]'. Since the characters for nu and su can be extremely similar, I regard this conjecture as relatively minor intervention.

- 12. The compound pañjarabandhana can be understood as a dvandva. This section of the sādhana derrives from HeTa 1.3.3, where the form pañjarabandhanaṃ (or pañjara bandhanaṃ) appears to be metri causa: repheṇa sūryaṃ purato vibhāvya tasmin ravau hūmbhavaviśvavajram | tenaiva vajreṇa vibhāvayec ca prākārakaṃ pañjarabandhanaṃ ca ||
- 13. For the final sentence of this paragraph— $ravivi\acute{s}vavajr\bar{a}bhy\bar{a}m$ ca $ra\acute{s}m\bar{i}bh\bar{u}ya$ samantatah $prasrt\bar{a}bhy\bar{a}m$ tat sarvam $drdh\bar{i}kury\bar{a}t$ — T_D yields a different sense, which is probably the result of either very free translation or misunderstanding: nyi ma dang sna tshogs rdo rje dag las 'od zer dpag tu med pa byung bas de ltar de dag thams cad brtan par bya 'o/
- 14. The Sanskrit manuscript's reading of simply $\bar{u}rdhv\bar{a}m$ in describing the $praj\tilde{n}\bar{a}$ is not impossible, but it is highly telegraphic and may even suggest the opposite configuration (namely, that the wide part of the triangle is at its bottom). With $steng\ yangs\ pa$, T_D indeed suggests reading something like $\bar{u}rdhvavi\hat{s}\bar{a}l\bar{a}$; however, other possibilities, such

as *upari viśālā* or *ūrdhvavistarā*, cannot be entirely ruled out. The compound *ūrdhvaviśāla* is relatively rare, but it has at least one attestation describing the *dharmodaya/ā*, in Umāpatideva's *Vajravārāhīsādhana* (verse 16, ed. p. 236), where it is incorporated into a verse in *upajāti* metre.

- 15. T_D renders tanmadhye and tadantarvarti of the previous sentence as de'i steng du. It renders madhyavarti in the following compound as la gnas pa. The translator appears, therefore, to have made a conscious decision to avoid translating these with words meaning 'inside' or 'in the middle of'. Elsewhere in the translation, madhya is generally rendered as dbus.
 - 16. T_D here and again below renders *repha* as *ram*.
- 17. **QUESTION** Is it correct that $m\bar{a}ruta^\circ$ is a dvandva, and that $dh\bar{u}mra^\circ$ etc. should be implicitly qualified by a word such as $mandal\bar{a}ni$? I.e., 'One should visualize wind ... as [mandalas] that are grey,' See Tib: sna tshogs rdo rje'i dbus su yang rlung dang/ me dang/ chu dang/ sa rnams ni du ba dang/ dmar po dang/ dkar po dang/ ljang gu rnams/ gzhu dang/ zur gsum pa dang/ zlum po dang/ gru bzhi rnams/ yam ram bam lam rnams yongs su gyur pa las steng nas steng du blta'o/ /
- 18. T_D lacks a reflex of $\bar{a}k\bar{a}ra$ at the end of this compound: ... zlum po dang/ gru bzhi rnams/
- 19. After $caturdv\bar{a}ram$, T_D reads rta babs bzhi pa, reflecting catustoranam. This word is certainly fitting, but at present I feel it is impossible to say whether it was added to the translation or lost from the Sanskrit witness.

The text here verges on entering *anuṣṭubh* metre, as it inspired by verses that can be traced back to at least the *Sarvatathāgatatattvasaṅgraha*, and which are often quoted or employed with variations in countless texts (see Tribe 2016: 143 n. 24 for references, and p. 254–5 for Vilāsavajra's version of these in the *Nāmamantrārthāvalokinī*; see also, for example, HeTa 1.10.21).

- 20. T_D lacks a reflex of *atra*. Perhaps *tatra* with a partitive sense would read better here, but I don't see very strong reasons to discount *atra*.
- 21. For each of the trees in the eight charnel grounds, T_D treats the words as if they were nominative forms. \dot{N} offers two instances of the words without case endings, one instance with a form that is corrupt in another way, and five instances of locative forms. If we were to accept nominative forms, a conjunction such as 'ca' would also be natural; I therefore find this possibility unlikely, and adopting it would require major alterations to the transmitted text. Compounded forms such as $har\bar{t}tak\bar{t}vrk\bar{s}amecakavarnah$ can, I believe, also be discounted, as they appear unprecedented and unnecessary. If locative forms were intended, we can account for the error in that it appears relatively easy for

a scribe to mistake $k ilde{s}a$ for $k ilde{s}e$; we also see that forms less susceptible to this confusion (e.g. $ilde{s}akhini$ or tarau) are here unambiguously locative.

According to some other accounts of the eight charnel grounds, there is a *śirīṣa* in the east (see Gerloff 2020: vol. 2 739–740; English 2002: 140). Like the NaiPra, however, the anonymous *Aṣṭaśmaśāna* places a *harīṭakīvṛkṣa* in the east. The Pandanus Database of Plants identifies *śirīṣa* as *Acacia lebbeck Willd*. (Siris tree) and *harīṭakī* as *Terminalia chebula Retz*. (Chebulic myrobalan). It is unclear to me whether or not Advayavajra regarded the two as synonyms.

22. These colours should be understood as qualifying the *yakṣas* (also called *mahard-dhikas* or *kṣetrapālas* in some sources) and not the *dikpatis*, whose colours are described later as being 'as they are commonly known'. The colours given by Advayavajra throughout this passage do not concord with the colours of the *yakṣas* given in the *Aṣṭaśmaśāna*. The *Aṣṭaśmaśāna*, for instance, specifies that the *yakṣa* is white, whereas Indra is yellow.

Here and below in the list of cloud colours T_D renders *mecakavarṇa* (a dark colour) as *ser po* (yellow).

23. The syntax of the formulation changes with the third $\pm smas \pm small and a$, which is also reflected in T_D . Other accounts of the eight charnel grounds, including visual depictions, make it clear that it is the $yak \pm small and a$ who are in the trees, whereas the $dikp \pm small and a$ reads:

tatrāsokavṛkṣe mahardhiko jvalākulakaraṅko nāmo makaramukho raktaḥ | vṛkṣādhasi dikpatir varuṇo nāgāsanaḥ suklaḥ | (ms. 4v; ms. reads vāruṇo; note the variant colours)

Presumably the locative *aṣokatarau* in this sentence should accordingly be understood in the sense of 'at the Ashoka tree' rather than 'in the Ashoka tree'.

- 24. Other sources name this tree as parkaţī, which Amara gives jaţī as a synonym.
- 25. Amara record $narav\bar{a}hana$ as a name for Kubera, but here it should be understood as referring to Nairṛti/Nirṛti, who indeed generally has a human as his mount (Wessels-Mevissen 2001: 98 ff.). T_D appears to have mistranslated this sentences, perhaps being thrown off by the direction being mentioned at the end of the sentence: $bden\ bral\ du\ la\ da\ dza\ ba\ du'i\ shing\ dang/\ mi'i\ gdong\ [D\ f.\ 220r1]\ can\ dang/\ bden\ bral\ dkar\ po'o/\ (du\ la\ da\ dza\ ka\ ba\ tu'i)\ P\ N;\ dul\ da\ dza\ ba\ du'i\ D).$
- 26. T_D rendering $bh\bar{u}tesa$ as 'byung po rather where one might expect 'byung po'i dbang po. It has also construed citra as qualifying nyagrodhapādapa and adds a finite verb: dbang ldan gyi mtshams su 'byung po dang/ khyu mchog gi gdong can no/ /nya gro dha sna tshogs pa bsgom mo/ /

- 27. As mentioned above, T_D renders mecaka as $ser\ po$. For $\acute{s}ukla\ T_D$ reads $skya\ bo$, whereas elsewhere in the translation $\acute{s}ukla$ is rendered as $dkar\ po$. The Sanskrit $p\bar{a}n\dot{q}u$ is rendered well here as $dkar\ ser$, but above it had been rendered simply as $dkar\ po$. The colours Advayavajra gives for the clouds exactly match those given in the $Asta\acute{s}ma\acute{s}\bar{a}na$.
 - 28. The word *cintanīyāḥ* has no reflex in T_D .
- 29. Here again it is evident that the transmitted text, which reads evam $dikp\bar{a}l\bar{a}\acute{s}$ $c\bar{a}s\dot{t}au$ $pak\dot{s}avarmani$ $boddhavy\bar{a}ni$, has suffered from another eye skip. The neuter form "varmani lends support to what can be understood from T_D : namely, that there should be a second sentence regarding the colour of caityas. The first sentence, which in T_D reads de ltar phyogs skyong brgyad kyi kha dog ni grags par zad do, is relatively unproblematic. Here I have 'back translated' grags par zad do with prasiddha—attestations for this correspondence cannot be found in the translation of mTshur Ye shes 'byung gnas, but we do find it elsewhere, such as in 'Gos Lhas btsas's translation of Ratnākaraśānti's $Mu\bar{A}$ ad HeTa 2.4.53 (ed. p. 183; D f. 186r).

The second sentence is slightly more problematic. T_D 's reading— $mchod\ rten\ brgyad\ kyi\ kha\ dog\ kyang\ rtogs\ par\ bya'o$ —suggests something along the lines of, $astacaity\bar{a}n\bar{a}m\ varn\bar{a}\ api\ boddhavy\bar{a}h$. Our Sanskrit manuscript, on the other hand, indicates that the sentence ends with $paksavarn\bar{a}ni\ boddhavy\bar{a}ni$. I suspect, therefore, that, for one reason or another, words are missing from the Tibetan translation, which is indeed very terse. Perhaps it could have read: $mchod\ rten\ brgyad\ kyi\ kha\ dog\ kyang\ de\ dang\ mthun\ par\ rtogs\ par\ bya'o/$ /. In any case, the compound sapaksavarna is, as far as I can tell, unattested elsewhere, so perhaps it is not the best conjecture; nevertheless, because it does seem to make good sense in the context, and because it requires minimal alterations to the transmitted reading, I provisionally propose it as currently the best solution.

- 30. T_D reads *dkyil 'khor gyi 'khor lo'i nang du* where the Sanskrit manuscript reads *maṇḍalamadhye*, suggesting the reading *maṇḍalacakramadhye*.
- 31. T_D lacks a reflex of tat in tatkamala°: padma'i nang shar phyogs la sogs pa'i 'dab ma bzhi.
 - 32. T_D erroneously reads ro bco lnga dang ldan par for pañcadaśa śavān.
- 33. The compound $candras\bar{u}ryasab\bar{i}jakartik\bar{a}parin\bar{a}ma$ as rendered in T_D does not reflect $sab\bar{i}ja$: $zla\ ba\ dang/\ nyi\ ma\ dang/\ gri\ gug\ yongs\ su\ gyur\ pa\ las$.
 - 34. T_D lacks a reflex for $j\tilde{n}ana$ in $samataj\tilde{n}anavan$: mnyam pa nyid dang ldan pa.
- 35. This last sentence is a paraphrase of HeTa 1.8.6c-7: ādarśajñānavāṃś candraḥ samatāvān saptasaptikaḥ || bījaiś cihnaṃ svadevasya pratyavekṣaṇam ucyate | sarvair aikyam anuṣṭhānaṃ niṣpattih śuddhadharmatā ||. Here I constitute these verses in accor-

dance with Kamalanātha's commentary, the *Ratnāvalī*. It should be noted, however, that the manuscript witnesses of the tantra provide a number of variant readings and, based on these readings and other evidence, one may wish to constitute the verses slightly differently.

- 36. T_D probably freely translates this portion of the text, combining $dve\bar{s}atmik\bar{a}$ and $vij\bar{n}anaskandh\bar{a}tmik\bar{a}$ into a single compound: mi bskyod pas rgyas btab pa/ zhe sdang dang/ rnam par shes pa' i phung po' i bdag nyid.
- 37. T_D may reflect a different reading for *bahirupāyarūpakhaṭvāṅgāliṅgitakandharā*: *kha tvaṃ gas gzugs 'khyud pa'o*. There is no reflex of *bahirupāya*°, and *gzugs* may be based on a Sanskrit word other than *kandhara*, which the translator previously rendered as *mgul*.
 - 38. T_D erroneously reads dbyangs la sogs pa'i for svaraniṣpannāḥ.
- 39. The Sanskrit manuscript's reading sparśadimudrāmudritāh is difficult to accept, given that these four goddesses have no obvious connection to a list beginning with sparśa. T_D , more plausibly, reads pukka $s\bar{\imath}$ la sogs pa'i rang bzhin du rgyas btab pa, with the reading rim bzhin in Peking and sNar thang instead of rang bzhin. The four goddesses indeed share their $mudr\bar{a}s$ with Pukkasī, Śabarī, Caṇḍālī, and Þombi, as taught in HeTa 2.4.16-19 and justified in 2.4.87-88. While a conjecture following exactly the Tibetan translation would be somewhat invasie, the more minimal conjecture of pukkasyādimudrāmudritāh seems reasonable. It seems not implausible that $sparśa^\circ$ was accidentally copied from the $sparśa^\circ$ appearing in the following sentence.
- 40. T_D erroneously renders $bhinn \bar{a} \tilde{n} jan \bar{a} bh \bar{a}$ as $dbyer med pa'i mig sman nag po'i mdog <math>lta \ bu$, as if reading $abhinn \bar{a} \tilde{n} jan \bar{a} bh \bar{a}$. A more common rendering by Tibetan translators for $bhinn \bar{a} \tilde{n} jan a$ is $stang \ zil \ bcag \ pa$ (see, for example, the seventh chapter of Lalitavistara, ed. p. 105 and D f. 57r). On the meaning of the compound and examples from literature, see Vogel 1967.
- 41. T_D lacks a reflex of piṅgala in jvalitapiṅgalordhvakeśāh: skra 'bar ba gyen du brdzes pa.
- 42. In place of $t\bar{a}luke$, T_D reads spyi bor, reflecting $m\bar{u}rdhni$ or something equivalent. On the face of it, T_D strikes me as more plausible, but I have yet to find a parallel in other Hevajra or Nairātmyā $s\bar{a}dhanas$ and thus do not feel confident in making changes to the transmitted text.
- 43. The *karmadhāraya* compound *pañcabuddhasvabhāvaśuṣkapañcamuṇḍāni* is somewhat awkward but perhaps does not require emendation.
- 44. T_D renders $vy\bar{a}ghracarm\bar{a}v$ rtakaṭinitambāḥ as if reading $vy\bar{a}ghracarmanivasan$ āḥ: stag gi pags pa'i sham thabs can.

- 45. See note 46 on the reading sthitah.
- 46. 1-2a corresponds to HeTa 1.6.11–12a, and these $p\bar{a}das$, along with 2b, are found in Saroruhavajra's $S\bar{a}dhanaop\bar{a}yik\bar{a}$ (ed. p. 112) and Bhadrapāda's $Dve\bar{s}avajras\bar{a}dhana$ (ed. p. 358). Given the lack of other parallel material for 2b (another instance is $\bar{A}c\bar{a}ryakriy\bar{a}samuccaya$ ms-g f. 183r7–8; ms-k f. 10r1–2 [folioation in Japanese; part of second bundle of folios]; D f. 201r), it is likely that Advayavajra is here drawing on the $S\bar{a}dhanop\bar{a}yik\bar{a}$.

In 1d, smrtah is the reading found in all palm-leaf witnesses of the HeTa available to me, and this is reflected in the Tibetan translations of the tantra (D f. 7r) and the NaiPra: $rnam\ par\ snang\ mdzad\ brjod$. The reading is also found in the Samputatantra (5.4.33d) and in the Vajravali (p. 452), as well as in Dobīheruka's Amṛtaprabhā as found in Bhattacharyya's edition of the Sadhanamāla (p. 447). Witnesses of Saroruhavajra's Sadhanopāyika, including its Tibetan translations, and of Bhadrapāda's Dveṣavajrasādhana support sthitah. I tentatively propose that the reading sthitah should be maintained in the NaiPra, despite its Tibetan translation, which here appears to have been influenced by 'Brog mi's translation of the root tantra. However, the two witnesses of the Acaryakriyasamuccaya that I have consulted also support reading smrtah.

The word $tath\bar{a}$ in 2b is supported by T_D : $lus\ kun\ rdo\ rje\ 'dzin\ bzhin\ no$. For the parallels, Gerloff's edition of the $S\bar{a}dhanop\bar{a}yik\bar{a}$ reads vaset, which is reported to be found in one paper witness, while $pa\acute{s}yet$, unmetrical and ungrammatical, is the reading of the $Hevajras\bar{a}dhanasangraha$ codex for both the $S\bar{a}dhanop\bar{a}yik\bar{a}$ and the $Dve\~{s}avajras\bar{a}dhana$. The canonical Tibetan translation of the $S\bar{a}dhanop\bar{a}yik\bar{a}$ reads $yan\ lag\ kun\ spyod\ rdo\ rje\ 'dzin\ (Gerloff\ 2020:\ vol.\ 1\ 135)$, while a para-canonical translation reads $yan\ lag\ kun\ la\ rdor\ 'dzin\ dgod\ (vol.\ 2\ 152)$ (no Tibetan translation of the $Dve\~{s}avajras\bar{a}dhana$ has been identified). The latter reading is probably corresponds to what is found in the $Ac\bar{a}ryakriy\bar{a}samuccaya$, which reads $sarv\bar{a}nge\~{s}u\ vajradhr\~{k}$ nyaset (also grammatically anomalous). In sum, I think it is difficult to regard any of the possible readings for the final word of 2b as particularly secure.

47. 2c–4b correspond to HeTa 2.6.3–4d but with certain variants. To asses these individually, let us first review the verses from the tantra, alongside readings from certain of its manuscript witnesses (which are of interest here), and then review the Tibetan translation of the NaiPra.

gurvācāryeṣṭadevasya namanārthaṃ cakrikā dhṛtā | durbhāsasyāśravanāya guror vajradharasya ca || 2.6.3 ||

3a gruvā°] *unreadable in* P **3b** namanārthaṃ] C Nb (°rthañ) K E; namanārthā Na; navanārthaṃ P **3b** cakrikā] $\Sigma_{\rm C}$; cakṛkā C **3c** °āśravaṇāya] C Nb K E; sravanāya Na; °āśramanāya P **3d** guror] C Nb P E; guro Na K

śravaṇayoḥ kuṇḍalaṃ dhāryaṃ mantraṃ japtuṃ ca kaṇṭhikā | rucakaḥ prāṇivadhaṃ tyaktuṃ mudrā bhajituṃ ca mekhalam | 2.6.4a–d

The NaiPra's verses in T_D run as follows:

```
bla ma slob dpon 'dod lha la//
phyag 'tshal spyi bor 'khor lo 'dzin// (2cd)

bla ma rdo rje 'dzin pa la'ang//
smod tshig mi nyan pa yi phyir//
rna ba dag la rna cha 'dzin//
sngags bzlas phyir ni mgul ba'i phreng// (3)

phyag rgya bsten pa ske rags te//
srog gcod spangs pa gdu bu ste// (4ab)
```

In 2d (= HeTa 2.6.3b), we find *śirasi* in Sanskrit and Tibetan of the NaiPra, but here there no evidence for it in the HeTa. The word *dhṛtā* is reflected in T_D , as in the HeTa. A very hypermetrical reading for the *pāda*, such as *namanāya śirasi cakrikā dhṛtā*, is not implausible for the language of the tantra, but I am hesitant to adopt it for the *sādhana* unless stronger evidence becomes available.

In 2d (= HeTa 2.6.3b), we find *namanāya* instead of the tantra's *namanārthaṃ*, and similarly, instead of *mantraṃ japtuṃ* found in HeTa 2.6.4b, the NaiPra appears to read *mantrajāpāya*. The NaiPra's readings are equivalent to those of the tantra metrically and in terms of sense.

In 3a (= HeTa 2.6.3d), it is interesting to note that, like the NaiPra's Sanskrit manuscript, one witness of the HeTa also reads \hat{a} is although the reading does not make very good sense and should probably be rejected.

In 3c, it appears that Advayavajra may have replaced the tantra's *śravaṇayoḥ* with *karṇayoḥ*, which is metrically smoother.

The pādas 4a and b evidently reverse HeTa 2.6.4c and d, and this is also reflected

- in T_D . The metre is rough in 4b but probably passable if rucakah is pronounced with the right emphasis. Finally, while the tantra's manuscripts point towards reading $mudr\bar{a}$ (probably to be understood as $mudr\bar{a}h$, accusative plural), it seems equally possible that Advayavajra wrote $mudr\bar{a}m$, as the NaiPra's ms indicates.
- 48. 4d exactly corresponds to HeTa 2.9.11b. Note that Snellgrove's edition of the tantra reads *maitricittataḥ*, with no variants reported. The more expected *maitrīcittataḥ* would be unmetrical, but all palm-leaf manuscripts of the tantra that are available to me support *maitracittataḥ*, as do citations of the *pāda* in Ratnākaraśānti's *Bhramaharasādhana* (ed. p. 166) and the *Sādhanopāyikā* (ed. p. 111).
 - 49. T_D renders this sentence in verse.
 - 50. cf. HeTa 1.8.20ab: tathā mānādiṣaḍdoṣān kartituṃ kartikā sthitā |
- 51. T_D suggests reading °caturmārādirudhirapūrņaṃ: bdud bzhi la sogs pa'i khrag gis bkang ba/
- 52. cf. HeTa 1.8.20cd: *bhāvābhāvavikalpasya śirasā padmabhājanam* | These *pāda*s can be understood as, 'The skull cup has [as its pure nature (*viśuddhi*)] the head of conceptualisation regarding existence and non-existence.'
- 53. The tribhanga is also mentioned in Advayavajra's Hevajraviśudhinidhi: nirmāṇadharmasaṃbhogakāyatrayaviśuddhyā tribhangaṃ (fol. 77v6). The word is rare in Buddhist texts but can also be found in Abhayākaragupta's $Vajrāval\bar{\iota}$ (p. 184), describing patākas in the compound anilāndolanatribhangalolābhinayāḥ. For the NaiPra, T_D renders the word as gnyer ma gsum mo, which misleadingly suggests the Sanskrit $trival\bar{\iota}$. The Hevajraviśudhinidhi's Tibetan translation renders it sum khyog (D fol. 186f3) and the $Vajrāval\bar{\iota}$'s as sum khugs (p. 185).
- 54. T_D renders $sv\bar{a}bh\bar{a}vikak\bar{a}yavi\acute{s}uddhy\bar{a}$ as $ngo\ bo\ nyid\ gcig\ pu$ 'i sku'i $rnam\ par\ dag\ pa$. The $gcig\ pu$ is difficult to account for, but perhaps is the result of reading (erroneously) $svabh\bar{a}vaikak\bar{a}ya$ °.
- 55. I believe we must accept the emendation of $nair\bar{a}tmy\bar{a}samayah$ to $nair\bar{a}tmy\bar{a}samah$ not simply because of support from T_D , but also because it makes the most sense. The practitioner is already $nair\bar{a}tmy\bar{a}samaya$ insofar as he has been visualising himself as the goddess; however, only after dissolving the $j\bar{n}\bar{a}nasattva$ into that visualisation does he become $nair\bar{a}tmy\bar{a}sama$.
- 56. cf. HeTa 1.8.22c-24b: prathamaṃ bhāvayet kṛṣṇāṃ dvitīye raktām vibhāvayet || 22 || tṛṭīye bhāvayet pītāṃ caturthe haritakāṃ tathā | pañcame nīlavarṇāṃ ca ṣaṣṭhame śukladehikām || 23 || ṣaḍaṅgaṃ bhāvayed yogī viramāntaṃ punas tathā | 24ab
- 57. cf. HeTa 1.10.11-12ab: prathamam meghavad bhāti siddhe tu māyāvad bhavet | sahasā svapnavad bhāti svapijāgradabhedavat || 11 || abhedalakṣaṇāsiddhau mudrāyogīti

sidhyati | 12ab

 $T_{\rm D}$ renders $svapnaj\bar{a}gradda$ śayor $abhedapr\bar{a}pto$ $mah\bar{a}mudr\bar{a}yog\bar{\imath}$ sidhyati somewhat differently, including a relative pronoun and reading mthong ba where one might expect thob pa: rmi lam dang sad pa 'dra ba'i dus su gnyis su med par gang gis mthong bas phyag rgya chen po thob par 'gyur ro/ /

58. Mathes (2014: 374; 2021: 132), in advancing his thesis that Advayavajra advocates a non-tantric form of Mahāmudrā practice, has written the following about this passage: '... it is not completely out of the question that an empowerment in Maitrīpa's system could start directly with the *prajñājñāna*-empowerment. In his *Nairāt-myāprakāśa*, Maitrīpa thus explains the ordinary creation stage as an optional practice, and not as a necessary requirement for the subsequent stages.' Judging by Mathes's translation, his assertion rests on having understood the word *anyatra* in the sense of 'alternatively'—perhaps as an equivilent to *athavā*. I am unsure why we should understand *anyatra* here as having a meaning other than the expected 'elsewhere'. The meaning 'elsewhere' makes good sense in the larger context of the *Nairātmyāprakāśa*: the *utpattikrama* taught here in this *sādhana* consists in visualising the goddesses; elsewhere, a *gambhīrotpattikrama* and forms of *utpannakrama* are also taught, and they too are connected with Nairātmyā.

Even were we to grant that Advayavajra intends anyatra to mean 'alternatively', this still does not support Mathes's interpretation that 'the ordinary creation stage' is an optional practice. This would simply mean that practitioners can choose which practice to do—for instance, they may practice $b\bar{a}hyotpattikrama$ on Mondays and $gambh\bar{\iota}rotpattikrama$ on Tuesdays; but that does not tell us whether or not $b\bar{a}hyotpattikrama$ is a necessary prerequisite for the subsequent stages, much less about the kind initiation required to engage in these practices. There may be evidence elsewhere in Advayavajra's corpus that addresses this question, which is indeed a very interesting one, but here the matter is simply not addressed.

- 59. T_D renders *virama* as *bral ba*, which may be an acceptable translation but is at odds with the more common renderings of this technical term as either *khyad dga*' or *dga*' *bral*.
- 60. This passage (beginning *nairātmyāhaṃkāram udvahan*) has been translated in two publications by MATHES (2014: 373–4; 2021: 132-3). In the former a draft edition of the passage by Isaacson is included in a footnote; and the latter publication also includes a translation of the sentence below that begins *anābhogayuganaddhādvayavāhi*.
- 61. I regard the reading *anavalokayann* as not very secure and *avalokayann* as at least an equally plausible reading. It is possible that the *utpannakrama* here invoves mani-

festing the deity's circle without so much as visualising a seed syllable. Equally possible, however, is that it involves intense focus on a particular seed syllable, which on its own makes the maṇḍala manifest. cf. Ratnākaraśānti's MuĀ ad HeTa 1.1.11: api ca tasya mahājñānasya bhāvanārtham mudrāpi sarvabuddhair adhiṣṭhatā, tadyathā sūkṣ-maḥ samagro hūṃkāraḥ svaracandramātrārahito vā bindumātraṃ vā sarṣapasūkṣmaṃ paramasūkṣmaṃ vā catuścakrabhedena vā catvāry akṣarāṇi saparicchadāni. mudrāpakṣe utpattikramaḥ prāpnoti notpannakrama iti cet—naitad asti. utpattikramaśabdo hy atra pāribhāṣiko na laukikaḥ. sa ca mantracihnādipariṇāmajaṃ devatādeham āha na mantramātram api (ed-i p. 483).

- 62. In place of vajraśarīre khalu jñānādhiṣṭhite, T_D suggests reading pañcajñānādhiṣṭhitāḥ as an adjective describing nāḍyaḥ: rdo rje'i lus kyang ye shes lngas byin gyis brlabs pa'i rtsa sum cu rtsa gnyis te/ N's reading is slightly more convincing: that the body is presided over by jñāna is frequently and famously expressed in the HeTa—for example, 1.1.12: dehasthaṃ ca mahājñānam. I also do not immediately see why the five forms of jñāna are relevant here.
- 63. This sentence strongly resembles a passage in Ratnākaraśānti's MuĀ ad HeTa 1.1.16: lalanārasane eva kaṇṭhād ārabhya yāvan nābhiḥ. atrāntare vāmetarapārśvanāḍyau candrasūryākhye. nābher adhas te eva yonināḍyau lalanārasanākhye¹ eva (¹lalanārasanākhye¹ ms-a ed.; lala... ms-b [lost to damage]) (ms-a f. 17r; ms-c 12v; ed. p. 19).
- 64. For $sn\bar{a}yvasthim\bar{a}l\bar{a}vahe$, T_D reads rgyus pa dang/ rus pa dang/ dri 'bab ba dag. Perhaps the translator erroneously read or understood $sn\bar{a}yvasthimal\bar{a}vahe$.
- 65. For vrkahrdayavahe, T_D reads glo ba dang snying 'bab pa ste. One would expect $mkhal\ ma$ for vrkka, which here refers to the kidneys.
- 66. For phupphusāntramālāvahe, T_D reads mchin pa dang rgyu ma dang dri 'bab pa. The rendering glo ba would be expected for phupphusa, and the translation again reflecs mala instead of $m\bar{a}l\bar{a}$.
- 68. This sentence closely resembles the phrasing of the MuĀ ad HeTa 1.1.17: hṛṣṭeti hṛṣṭavadanā. sā liṅge sīmantamadhyagā (sīmantamadhyagā] em.; sīmāntamadhyagā] ms-c ed-t; sīma<ā>ntamadhyagāḥ ms-a) (ms-a fol. 18r; ms-c fol. 13v; ed-t p. 20). Based on this we can feel confident with the emendation liṅge from the manuscript reading of hṛlliṅge.
 - 69. For svarūpiņīsāmānye, T_D reads phra gzugs ma dang spyi ma dag, as if reflecting

sūksarūpiņī.

- 70. Where the Sanskrit manuscript reads medahkhetavahe, we expect the second member of this compound to be a word meaning 'tears'. T_D 's reading $mchin\ pa$ is likely a scirbal error for $mchi\ ma$. The conjecture medośruvahe is plausible, but medahkhedāśruvahe is a more likely cause of error. Kamalanātha, in his $Ratnāval\bar{\iota}$ (ms. f. 3r7), uses the word śokāśru in this context, which can be regarded as an equivilant to khedāśru.
- 71. Here where the Sanskrit manuscript reads <code>lasimhāṇa</code>, I conjecture <code>bālasiṃhāṇa</code> on the basis of <code>Vasantatilaka</code> 6.39 (also <code>Sampuṭatantra</code> 6.2.32), as well as on the basis of MuĀ ad HeTa 1.1.17: <code>sumanā jānudvaye bālasiṃhāṇavahā</code> (<code>bālasiṃhāṇavahā</code>] ms-c edt (<code>singhāṇa</code>); <code>bālasiṅghāṇakāvahā</code> ms-a) (ms-a 18v; ms-c fol. 13v; ed-t p. 21). Perhaps <code>bāla</code> is to be understood in the sense of a child, and something akin to this understanding is reflected in the <code>Vasantatilaka</code>'s Tibetan translation, which renders <code>bālasiṃhāṇa</code> as <code>byi pa'i sna ba</code> (D fol. 302r). It also seems possible to understand <code>bāla</code> (or <code>vāla</code>) in the sense of hair. The MuĀ's Tibetan translation, however, renders the compound in question as <code>kha chu dang snabs</code> (D f. 232r), which suggests reading <code>lālāsiṃhāṇa</code>. This reading is attractive and a common combination in Sanskrit, but I not seen support for it in Sanskrit witnesses of the passages in question. The NaiPra's Tibetan translation reads <code>stobs dang snabs</code>, and the Tibetan translation of the <code>Saṃpuṭatantra</code> reads <code>sha dang snabs</code>, both of which could suggest reading <code>balasiṃhāṇa</code>, but again I have yet to see a Sanskrit witness support this. The matter, therefore, remains somewhat in doubt.
- 72. This sentence is found in Ratnākaraśānti's MuĀ ad HeTa 1.1.14: $tatra\ y\bar{a}\ n\bar{a}d\bar{l}\ yam$ $pras\bar{u}te\ puṣṇāti\ gacchati\ v\bar{a}\ s\bar{a}\ tadvah\bar{a}\ yathāyogam\ (tatra\ y\bar{a}\ n\bar{a}d\bar{l}\ yam]\ ms-a\ ed;\ tatra\ n\bar{a}d\bar{l}\ |\ n\bar{a}d\bar{l}\ yam\ ms-c)\ (ms-a\ fol.\ 17v;\ ms-c\ fol.\ 13r;\ ed.\ p.\ 20).\ T_D\ is\ problematic\ here: 'di\ yang\ rtsa\ nas\ rab\ tu\ 'dzag\ pas\ rgyas\ par\ byed\ pa\ dang\ 'gro\ bar\ byed\ pa\ dang\ de\ nas\ cung\ zad\ 'bab\ pa'o\ /\ I\ am\ not\ certain\ what\ the\ translator\ intended\ by\ this\ formulation, but\ there\ appears\ to\ have\ been\ some\ confusion\ on\ his\ part.\ He\ does\ appear\ to\ have\ read\ prasṛte,\ which is\ also\ the\ reading\ of\ the\ NaiPra's\ Sanskrit\ manuscript.\ I\ believe\ the\ MuĀ's\ reading\ is\ supperior\ here,\ as\ it\ provides\ a\ clearer\ explanation\ of\ the\ chanels\ relationship\ to\ the\ substances,\ and\ because\ it\ would\ otherwise\ be\ difficult\ to\ differentiate\ prasṛte\ and\ gacchati\ in\ meaning.$
- 73. A few elements are missing from this sentence in T_D —namely, kim ca, $et\bar{a}h$, and $^{\circ}$ tribhava $^{\circ}$: sku dang gsung dang thugs dang/ chos dang longs spyod rdzogs pa dang/ sprul pa'i ngo bo nyid ni 'khor lo bzhir lus la rnam par gnas pa'o//
- 74. For *viśvavarṇacatuḥṣaṣṭidalaṃ*, T_D suggests including a word such as *padma* or *kamala*: *kha dog sna tshogs pa padma 'dab ma drug cu rtsa bzhi pa*. In the following sentences we have similar compounds: *śuklāṣṭadalakamalam*, *raktaṣoḍaśadalaṃ*, and *śuk-*

ladvātriṃśaddalaṃ. For the latter two compound, T_D shows no reflex of a word meaning 'lotus'. Either with or without the word lotus, all of these compounds are cogent, so an emendation to the first based on T_D is not strongly compelling. For the first of these four compounds, \dot{N} reads viśvavarṇaṃ catuḥṣaṣṭidalaṃ, but the subsequent compounds strongly suggest that the colour should be part of the compound.

- 75. T_D lacks a reflex of śukla in śuklāṣṭadalakamalaṃ: padma 'dab ma brgyad pa
- 76. There are a few points to consider regarding the reading in T_D : 'bad pa med par zung du 'jug pa gnyis med par 'byung ba'i byang chub kyi sems mngon du byed pa'i rgyu'o/ /ngo bo nyid kyi rim pa'o/ / First, syntactically T_D understands two sentences where I understand only one. T_D has perhaps confused karaṇa with kāraṇa. It also reflects the word advaya, not found in the Sanskrit manuscript, within the compound ending vāhin, and it connects this compound with the following word, thus qualifying bodhicitta. These last two points are valid possibilities, and of them I wish to accept the former. We find a few parallels in Advayavajra's corpus for the compound yuganaddhādvayavāhin: e.g., in the Amanasikārādhāra (ed. p. 497), the Sekatātparyasaṅgraha (ed. p. 413), and the Pañcatathāgatamudrāvivaraṇa (ed. p. 377). In the Sekatātparyasaṅgraha, however, we also find yuganaddhavāhin, as part of the compound asaṃkṛtābhedayuganaddhavāhibodhasamaya. In general, however, it would appear that Advayavajra's preferred formulation includes the element advaya.

Whether $an\bar{a}bhogayuganaddhav\bar{a}hi$ should qualify bodhicitta or $s\bar{a}k\bar{s}\bar{a}tkarana$ is slightly more difficult to determine, but perhaps ultimately there is no great difference. Bodhicitta, the innate nature of mind, is $an\bar{a}bhogayuganaddh\bar{a}dvayav\bar{a}hin$ in that it supports ($v\bar{a}hin$ in the sense of 'bearing') the non-dual state of the effortless coalescence of bliss/compassion and emptiness; manifesting bodhicitta is $an\bar{a}bhogayuganaddhav\bar{a}hin$ in that it produces/leads to ($v\bar{a}hin$ in the sense of $pra-\sqrt{s\bar{u}}$ etc.) the non-dual state that is effortless coalescence.

- 77. Where the Sanskrit manuscript reads $sv\bar{a}h\bar{a}nt\bar{a}h$, T_D reads $h\bar{u}m$ phat mthar gnas pa and indeed ends the mantra with $h\bar{u}m$ phat $sv\bar{a}h\bar{a}$.
- 78. I have hesitantly settled on this conjecture with some inspiration from T_D : gsang sngags tshul gyi bstan bcos snying/ /bla ma dam pa'i 'bad pa las shes pa. We might expect mantranaya for gsang sngags thsul, but that would be metrically bad; a genitive case ending would also be impossible, but perhaps we could also conjecture the compound mantrayānaśāstrasāraṃ. My solution has the slight disadvantage of forming a ra-vipulā in the pāda, which is unexpected but not impossible, and we can't easily explain the formation of the corrupt manuscript reading: cakranayā śāstrasāraṃ raṃ. Note that T_D has also interpreted guroḥ as a genitive form connected to yatnena, leading a bizarre

meaning: 'Having understood the essence of the *śāstras* of the Way of Mantra by means of [my] Guru's effort'. I interpret the text as I have construed it as follows: 'Having diligently understood from [my] guru the essence of *śāstra* in the Vehicle of Mantra ...'

- 79. I have made this conjecture by modifying the transmitted text minimally to arrive at something (perhaps) coherent. T_D appears to be translated rather freely: dkyil 'khor 'khor lo zab mo yi/ / rnam par nges par 'gyur ba ni/ / ji ltar 'dir ni lus can rnams/ / ri khrod mgon gyi zhabs kyi chu skyes kyi/ / rdul rnams spyi bos ma blangs pa/ / de dag nges par ji ltar 'gyur/ / We can see evidence for mastaka with the word spyi bo. The final pāda, de dag nges par ji ltar 'gyur, does not yield a coherent meaning for me. The metre is Drutavilambita.
- 80. I have yet to find a compelling conjecture for the first $p\bar{a}da$. T_D reads as follows: $mngon\ par\ rtogs\ pa\ 'di\ yis\ thob\ pa\ yis/$ / $dge\ ba\ 'di\ yis\ 'jig\ rten\ mtha'\ dag\ ni/$ / $srid\ pa\ gsum\ gyi\ sdug\ bsngal\ yid\ mi\ bde\ spangs\ te/$ / $rdo\ rje\ 'dzin\ pa'i\ go\ 'phang\ rab\ gnas\ shog$ / . The metre is Puspitāgrā.
 - 81. That is to say, she belongs to the *dveṣakula* of Akṣobhya.
